

MMFX Technologies, a Commercial Metals Company, specializes in high strength steel products with varying levels of corrosion resistance, so designers can utilize the high strength efficiencies and best match the corrosion protection requirements of the application.

ChromX[®] 9000 (ASTM A1035 CS Grade 100 or 120) provides high corrosion protection for severe corrosive environments. Designers can meet 100-year service life requirements called for on many infrastructure projects by specifying ChromX 9000.

ChromX[®] 4000 (ASTM A1035 CM Grade 100 or 120) offers the same high strength benefits with a medium level of corrosion resistance for projects requiring 40 to 60 years of service life, depending on the specific application and design for the concrete structure.

ChromX[®] 2000 (ASTM A1035 CL Grade 100 or 120) is a low cost product ideal for construction projects in which high strength designs reduce the amount of steel used, improving constructability, and reducing construction time and costs for the owner.

All materials made in USA.

The following products are available in ChromX steel grades:
